WHOLESALE AND RETAIL

B. H. BOWER

Proprietor and Manager

DEAR PATRONS:—

We wish to thank you for the confidence you have placed in us, in the past, and assure you we heartily appreciate your help in making our business what it is today.

It has been our privilege to serve you with clean "Home-Grown Trees," since 1898, and it will be a pleasure to continue to do so. We have always tried to make our prices conform to good business rules, giving the lowest rate consistent with healthy, clean stock. In fact we have ever followed a profit sharing plan; giving the buyer a chance to get clean trees full of life, at the lowest possible price.

Where you intend to plant in large lots, it will always pay you to ask us for our best rates on large lots.

It will be our pleasure to save you money, when it is possible to do so and maintain a high standard of business.

Instructions for Planting

When the trees arrive, remove all straw from them. Heal them in, wetting them good. Tread the dirt to keep out the air. Dig hole large enough to admit all roots without crowding. Set two inches deeper than tree stood in Nursery row, and cut away with sharp knife all bruised roots.

Cut one-year trees back to 24 or 30 inches after planting. Head branch two-year trees back to 3 to 5 buds from main stem.

When planting fill hole half way with dirt, working it well around and among the roots. Then fill hole with water, let stand until well settled, fill to a level or better with dirt. A light mulch, on top after tree is planted will help to keep down weeds and retain moisture.

Fall Planting:—It is a well known fact, among experienced planters, that fall planting is desirable, if done at proper time and in the right way.

Planting in fall should be at least two weeks before ground freezes up for winter, and where there is danger of heavy freezing dirt should be hilled up around the

trees at least eight inches, or a rough Mulch may be used, tho Mulch makes a nesting place for mice, which may ruin the trees.

Grape vines must be buried with two to four inches of dirt. No matter what condition the ground is in, either for spring or fall planting, always water when you plant.

Strawberry plants may be set out either in spring or early September.

When ordering Parcel Post Shipments, it will pay you to add 10c for Special delivery stamp, which will insure quick delivery.

Money should be inclosed with each order.

The County pest inspector carefully inspects all our trees before they are sent out.

This little booklet comes to you just to acquaint you with some of the varieties we grow—just some of the leaders. We could not list them all in so small a book.

Our trees are grown by experts and carefully packed when shipped out of Provo.

We exercise care to have all trees delivered true to label, and stand ready to replace without cost should a mistake occur.

In no case will we be responsible for a greater sum than the original cost of the trees to the planter.

We invite you to come and Inspect the

Trees at our grounds.
